

Visa Reduces Model Run Times from 13 Hours to 90 Seconds with Nicus

Background

Visa Inc. (NYSE: V) is a global payments technology company with over \$16B in annual revenue. Visa connects consumers, businesses, financial institutions, and governments in more than 200 countries and territories, enabling them to use digital currency instead of cash and checks. Visa handles more than 65,000 transaction messages a second, with fraud protection for consumers and assured payment for merchants.

Challenge

Visa's IT Finance team's existing tool (Apptio) took too long to run Visa's cost models and provided limited detail to support analysis and decision making. Sta was spending extra time outside the tool performing manual calculations in spreadsheets, instead of providing the business with much-needed analysis.

Solution

Nicus replaced Apptio in 30 days, reduced model run times from 13-16 hours to 90 seconds, and provided the supporting detail needed to enable decision making focused on cost reductions and efficiency gains within IT. With Nicus providing rapid cycle times and full automation, the team was able to dedicate more time to analysis of results, instead of manual calculations.

Highlights

- Managing \$1.4B annual IT spend in Nicus
- Delivering 2 modules into production in just 30 days paved way for rapid benefits realization
- Increasing operational efficiency with reduced model run times (from 13-16 hours to 90 seconds)

Elevate IT. Ignite Possibility.

At Nicus, we empower organizations to realize their full potential by elevating IT. We're passionate advocates, providing financial management solutions that expand what's possible. We believe what we do with technology defines what we can do in the world.
